

User Manual: Annex-PDF Tool

✓ Step 1: Launch the Application

- Double-click the .exe file to open the tool.
- You will first see the **Index Tool** window, where you can manage and export the document index.

📁 Step 2: Prepare the Index

1. 🔍 Browse PDF Folder

- Click "📁 **Browse Folder**" and select the folder that contains the individual PDF files you want to work with. The files will appear in a preview list.

2. 📄 Edit & Preview Index

- Click "✍ **Edit & Preview Index**" to open the editable index table.

In this table, you can:

- ✓ Rearrange the order of PDF files
- ✓ Add, rename, or delete annexure labels
- ✓ Edit the display name of each file

(Note: The actual file link is hidden and preserved in the background, even if the display name is changed.)

You can also insert blank rows, merge or split annexure entries, and manually edit page ranges.

3. 🚀 Finalize and Export

- Once the index is ready, click "✓ **Finalize and Export**".

You'll be asked to enter:

- ✓ **Client Name**
- ✓ **PAN**
- ✓ **Document Description**

The tool will export the index in two formats:

- ✓ **Styled PDF Table**
- ✓ **Formatted Excel File**

A .txt file is also generated automatically containing annexure labels in the format: <Page No.>,<Annexure Name>; Example: 2,Annexure A;5,Summary;

This .txt file will be used in the merge tool for auto-placing annexure labels.

🔄 Step 3: Switch to Merge & Annotator Tool

- Click "➡ **Go to Merge Tool**" to move to the next stage. This opens the **PDF Merge-Edit-Split Tool** window.

✂ Step 4: Merge and Annotate PDFs

1. 📁 Input & Output Paths

- Click "📁 **Browse Input Folder**" to load your PDFs.
- Click "💾 **Save As**" to select where the merged file will be saved.

2. 📄 Arrange PDFs

- Use the ↑ **Up**, ↓ **Down**, and 🗑 **Delete** buttons to reorder or remove files from the merge list.

3. 📄 Page Number Settings

You can customize how page numbers appear:

- Choose **Font**, **Size**, **Alignment** (Left, Center, Right), and **Vertical Position** (Top, Bottom, Middle)

User Manual: Annex-PDF Tool

- Set X and Y positions manually for precision

Position	X	Y	Description
Top-Left Corner	10	20	Very close to the left and top edge
Top-Right Corner	570	20	Near right edge, just under the margin
Bottom-Left Corner	10	830	Very close to bottom left
Bottom-Right Corner	570	830	Very close to bottom right
Center-Bottom	290	830	Centered at the bottom of the page
Center-Top	290	20	Centered at the top of the page

**A4 size: Width: 595 pt | Height: 842 pt

- Define:
 - ✓ **Start From Page #** → From which actual page in the merged PDF page numbers should begin
 - ✓ **Start With Number** → What should be the first printed number (e.g., actual Page 3 = Page No. 1)
*Example: If set as **Start From Page #: 3** and **Start With Number: 1**, then the 3rd page will be labeled as Page 1.*
- Enable or disable page numbers with the checkbox.

4. **Annexure Labels**

- Paste the annexure mapping (from the earlier .txt file) into the input field:
Format: 2,Annexure A;5,Summary;7,Index
- Customize **Font, Size, Alignment, Vertical position, X, and Y** just like for page numbers.

Step 5: Generate Merged Output

- ✓ Click "☒ **GET OUTPUT PDFs**" to begin the process.
- ✓ A **progress bar** will indicate merging and annotation status in real-time.

Step 6: Intelligent File Splitting (Optional)

- If the final merged PDF exceeds the specified **Max Size per Part (MB)** (*default is 4.5 MB*), the tool will auto-split it into smaller parts.
 - ✓ You will be asked if you want to proceed with splitting.
 - ✓ The parts will be saved in a folder named **split_output**, located next to the merged file.

Key Features

- Dual interface: **Index Tool + Merger Tool**
- Editable file display names without affecting file linkage
- Styled PDF & Excel export of Index
- Flexible page number configuration
- Annexure labelling with precise positioning
- Auto-splitting based on file size threshold
- Live progress tracking
